The Cluster 3 Workshop "Big data in Regional Science and Transport" will be held on 7th October 2016 in Molde, Norway. This workshop will bring together researchers and practitioners to discuss the latest developments in the application of big data to transport and spatial analysis. The workshop will cover a range of topics, including the use of big data in urban planning, traffic management, and transport policy. The workshop will include keynote speeches, panel discussions, and interactive sessions, and will provide a platform for researchers to share their latest findings and to discuss future research priorities in this emerging and rapidly evolving field.

The workshop will be hosted by Professor Svein Brathen and his team at Molde University College, and will be supported by NECTAR, the Network of Excellence in Transport and Mobility Research. NECTAR is an international research network that brings together researchers from around the world to collaborate on transport and mobility research.

The workshop will provide a valuable opportunity for researchers to network with their colleagues, to exchange ideas and to foster collaborations. It is particularly relevant for researchers in the fields of transport and spatial analysis, as well as for policymakers and practitioners who are interested in the latest developments in the application of big data to transport and spatial analysis.

If you are interested in attending the workshop, please visit the NECTAR website for more information and to register. NECTAR members can order directly from the workshop website and will receive a 50% discount on registration fees. Early bird registration will close on 1st July 2016.
